# TEACHER INFORMATION SHEET

## Background

Kspace takes visitors to Lake Mungo, 45,000 years ago – a time when people lived alongside megafauna.

A number of large, now-extinct animals once roamed Lake Mungo, and because Australia has long been separated from the other continents, these animals were unique to this landmass.

## Instructions for teachers

This exercise sheet encourages children to think about the concept of extinction, and how different animals can be grouped together based on where they evolved and what they eat.

Students can work together or by themselves to cut and paste the words from the answer sheets, or they can write their answers to the questions in the spaces provided.

## Answers

ANIMAL	ANSWERS
1. <i>Diprotodon</i>	Mammal, extinct, native, herbivore
2. Wallaby	Mammal, not extinct, native, herbivore
3. <i>Genyornis</i>	Bird, extinct, native, omnivore
4. Woolly mammoth	Mammal, extinct, non-native, herbivore
5. Tasmanian tiger	Mammal, extinct, native, carnivore
6. Kiwi	Bird, not extinct, non-native, omnivore
7. Magpie	Bird, not extinct, native, omnivore
8. Crocodile	Reptile, not extinct, native, carnivore
9. Dingo	Mammal, not extinct, non-native, carnivore
10. <i>Procoptodon</i>	Mammal, extinct, native, herbivore
11. Koala	Mammal, not extinct, native, herbivore
12. Cobra	Reptile, not extinct, non-native, carnivore
